

Ciclo de Charlas en Ingeniería Mecánica

El Programa de Magíster en Ciencias de la Ingeniería Mecánica invita cordialmente a la comunidad universitaria a la charla:

Titulo

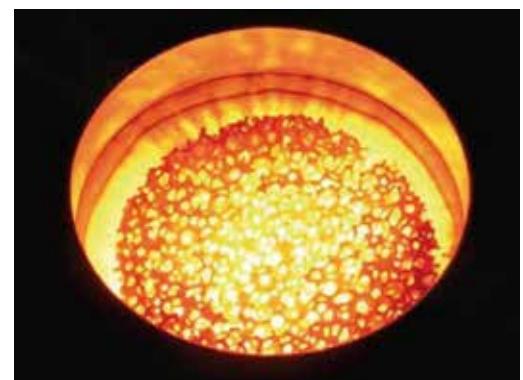

Filtration combustion of solid fuel.

Expone

Salgansky Eugene Aleksandrovichn, Ph.D.
Institute of Problems of Chemical Physics of the
Russian Academy of Sciences, Russia.

Resumen

The numerical investigation of filtration combustion of solid fuels (statement of the task, make the algorithm of the decision, writing the computational program and currying out the calculation); The experimental investigation of process (stating of the experimental task, designing the installations, currying out the experiments); The management of work on under-investigation scientific field. An introduction to flames; The properties of combustion processes in porous inert media; Flame stabilization in porous media; Ceramic materials for porous burners; Selected examples of technical applications; and The practical experience with the porous burner technology.

Fecha

Miércoles 22 de Abril, 11:00 hrs, Auditorio C-259, Casa Central.
